FRRIENDS and Patrons: A Happy New Year to you all! Our seeds are always the best and prices right. Thousands of our customers have used them for **forty years**; that is **testimony** that is **sufficient**. We thank you all for very liberal orders given us in the past.

We greatly appreciate and want your orders. Plant **Alneer's Reliable Seeds** to be assured of large and bountiful crops. We have the finest and most select stock of seeds in the world, and sell them at prices that are right; no better seeds can be had at any price. We ask you to compare prices with others you may get, and by doing so you will find it to your advantage to buy from us; we save you money. Our motto is: **Best Seeds Only**. We have harvested a large fine crop this year of very best quality seeds and have placed prices very low for these fine seeds—come early and get your supply.

Thanking our friends and patrons for their kindness and liberal orders in the past, we solicit a continuance of the same. Send in your orders as early as possible, and induce your neighbors and friends to join their orders with yours, and all send for **Alneer's Reliable High Grade Tested Seeds**. Yours very truly,

ALNEER BROTHERS.

To All Planters of Seeds:

Just as soon as you can after receiving our catalogue, take an hour or two and look it over and make out your seed order and send it to us by next mail. It will help us very much in filling your order promptly, while stocks hold out as some things are very short crop this year, among others Peas, Beans, Sweet Corn and Lettuce and later on as spring nears, orders are coming in so fast we are driven hard to keep up. It will help you just as much, for you will have your seeds on hand for planting at the proper time and when the ground is in best condition to receive the seeds.

We thank you very much if you will take notice of this request and for your valuable orders.

PLEASE READ

All seeds are shipped as quickly as possible after the order is received. We always aim to send all the seeds at one time but it sometimes happens that a certain sort of seed is not in stock, and not wishing to delay the whole order on that account we ship the seeds and let that sort follow soon as in. Plants are booked and shipped in proper season; we ship no plants during cold weather on account of danger from freezing. Tender bulbs are shipped in the spring. Fall bulbs are booked and shipped from September to December 1.

SEEDS GIVEN AWAY OR EXTRAS

Every year we distribute free to our customers large quantities of seed packets of choice and rare sorts. The larger the order the greater will be the number of extras thrown in as a rule, exceptions being made only when heavy bulk seeds are ordered, such as farm seeds.

OUR PACKETS

We guarantee that our packets are large size and well filled with choice, fresh seeds. Our customers say that our packets are larger and better filled than most seedmen's packets. We have no half size packets.

WHAT WE WARRANT

We believe that the seeds we offer are excelled by none in the world, yet our practical experience of many years fully assures us of the fact that crops may fail no matter how fresh and pure the seeds sown to produce them may be. Therefore, while we exercise the greatest care to have all seeds pure and reliable, it is hereby mutually agreed between ourselves and the purchaser that we are not in any respect liable or responsible for the seed sold by us, or for any loss or damage arising from any failure thereof in any respect.

OUR PRICES

Have been placed as low as possible for first quality and honest seeds, besides the many **Extras** we shall continue to freely throw in.

The variety known as Ball-Head has been selected and perfected for more than 50 years by the Danish gardeners, who prize it so highly that they grow it almost exclusively for winter cabbage, and annually export large quantities to London and other ports. It will stand long journeys and keep far into spring, and is of most rich mild flavor. Heads round as a ball, good size, solid and very fine grained, of extremely delicate cooking quality. Pe-Tsai, Chinese or "Celery" Cabbage

Chinese or Celery Cabbage has attained great popularity in the last two years. One grower writes: "This fall there was a vegetable called Celery Cabbage sold on our market and people went crazy over it." Pe-Tsai produces beautifully crisp, celery-like heads that blanch easily and that resemble a giant Cos Lettuce. As a salad it rivals the finest lettuce, while cooked like cabbage or spinach it makes a delightful "greens." Early sowing is not recommended, as during hot weather it has a tendency to run to seed without heading. Sow seed, in any good soil, the first of August, making rows 24 to 36 inches apart and thinning to 15 inches apart in the row. Pe-Tsai will not stand frost. Pkt. 6c, oz. 25c, $\frac{1}{4}$ lb. 75c.

Celery Cabbage

CARROTS

Carrots thrive best in warm, light soil, enriched with well rotted manure. Sow as early in the spring as the ground can be prepared, in drills 15 inches apart; cover the seeds about one-half inch deep, and thin to from 3 to 5 inches in the row. In field culture when grown for horses and cattle, the rows should be two feet apart, so that the crop can be worked with horse and cultivator.

Alneer's New Excelsior Corn.

SWEET CORN

Alneer's New Excelsior. We have tested many samples of Evergreen corn that were claimed to be earlier than Stowell's Evergreen and to be just as good, but we have never found any of them so valuable as the stock of this variety we offer. It has been proven both on our trial grounds and in the field to come in to fit condition for use much earlier than Stowell's Evergreen and to remain in condition quite as long. The ears are large, with sixteen to twenty rows with very long grain which is of the very best quality. Pkt. 5c, ½pt. 11c, pt. 21c, qt. 40c, ¼bu. \$1.10, ½bu. \$2.00, ¾bu. \$3.95, bu. \$7.90.

KLECKLEY "SWEETS"
THE SWEETEST OF ALL MELONS

COLE'S EARLY

Melon—Water

Tom

Watson

Kleckley's Sweets. Are the sweetest flavored watermelons grown. Oblong shape, dark green skin; bright red flesh, always solid and of the most luscious flavor imaginable. The only fault we discover is that the rind is too tender for the melons to ship well to distant markets, but for the home garden and local market no other melon can equal the Kleckley Sweets. Pkt. 5c, oz. 8c, $\frac{1}{4}$ lb. 20c, $\frac{1}{2}$ lb. 35c, lb. 60c.

The flesh is brilliant red in color, and remarkably solid. It is particularly firm and solid at the heart. The flavor is delicious, and the flesh is entirely stringless. The rind, though thin, is very tough, making an effective protection to the flesh, and insuring good shipping qualities. It is almost unrivalled in all respects for both home and market; and in many places not well adapted. The reason that this fine new watermelon received the name of International was because of its proven ability to flourish almost anywhere. Pkt. 5c, oz. 8c, $\frac{1}{4}$ lb. 20c, $\frac{1}{2}$ lb. 35c, lb. 60c.

Mammoth Gray Monarch. Attains a weight of 60 pounds and over. Outside skin of a mottled gray color; shape large; flesh bright crimson, sweet and delicious flavor. Pkt. 4c, oz. 7c, $\frac{1}{4}$ lb. 18c, $\frac{1}{2}$ lb. 35c, lb. 60c.

TOMATO.

Livingston's Globe. A new variety of exceptional merit. It is of beautiful globe shape, which permits of a greater number of slices being taken than from flat-fruited sorts. Among the first to ripen, although of large size, very smooth, firm fleshed, few seeds, ripens evenly; color a beautiful glossy rose, tinged purple. Pkt. 5c, oz. 25c, $\frac{1}{4}$ lb. 85c, $\frac{1}{2}$ lb. \$1.60, lb. \$3.00.

Pkt. 5c, oz. 25c, $\frac{1}{4}$ lb. 90c, $\frac{1}{2}$ lb. \$1.75, lb. \$3.50.

Earliest June Pink. This is a new variety, similar in habit to the famous "Earliana," differing only in its color which is pink in color instead of red. The plant is neat and compact, branching freely, with fruit hanging in clusters. Under exactly the same conditions as Earliana, the June Pink yielded exactly the same results. Earliness, blight resisting, long and heavy yielding, are its main characteristics. An excellent shipper on account of its reasonably tough skin. Will take a place at the head of the pink sorts. Pkts. 5c, oz. 25c, $\frac{1}{4}$ lb. 80c, $\frac{1}{2}$ lb. \$1.50, lb. \$2.75.

The color is brilliant scarlet-crimson, untinged with purple, and ripens up almost completely to the stem. The Crimson King, like the Ponderosa, is almost seedless. The flesh is firm and meaty, solid as beef-steak, and of superb quality. It is enormously prolific and early for so large a tomato. Pkt. 10c, oz. 30c, $\frac{1}{4}$ lb. \$1.10, $\frac{1}{2}$ lb. \$2.10, lb. \$4.00.

Pride of Illinois Corn

Ears are borne uniformly at about four feet from the ground, high enough to get the sun and air, low enough to be protected from windstorms. The ears are large, 10 to 12 inches long, nearly cylindrical, holding their size well to the end, are well rounded or capped over at both ends and have that well groomed appearance of thoroughbred corn. The fine shaped grains, which are set in straight rows, are quite deep and broad at the germ end, thus making a solid or heavy ear, and they are of such rich yellow color and uniform size that it is surely the handsomest corn we have ever seen. Sudan Grass

Sudan Grass. It was first introduced into the United States in 1909 from Sudan under the name of Garawi. Tests were made in all parts of the United States. As a result of the tests the Department of Agriculture reports that Sudan Grass will be of the greatest value in the western and southwestern states where the rainfall is deficient. The Department also reports that it will make just as good yields in most of the central and northern states, and will grow nearly everywhere. Sudan Grass is strictly an annual and dies each year like Millet. It belongs to the sorghum family. Is best sown broadcast or with a drill when it can be cut with a mower and treated like any other hay. It grows three to five feet high. Produces twice as much hay per acre as any of the common forage plants. Sow about corn planting time, after the ground becomes warm. 10 to 15 lbs. will seed an acre. From Central United States southward it is possible to have from 2 to 3 cuttings. From seeding to cutting 75 to 80 days are required. The second cutting comes on in about 45 days. The yields vary from 1 to 8 tons cured hay per acre. Sudan grass, lb. 30c, prepaid. Not prepaid, 5 lb. 80c, 10 lb. \$1.25, 25 lb. \$2.50, 50 lb. \$4.75, 100 lb. \$9.00.

Feterita. A new non-saccharine sorghum, maturing its crop 20 to 30 days earlier than Kaffir Corn, making it well adapted to sections with short seasons. Feterita grows about 5 feet high, branching freely from the roots and producing numerous large heads of white grain. It is a remarkable drought resister, producing a crop when all other kinds of fodder fail. The grain is excellent for feeding chickens or any stock. The fodder is much finer than corn stalks, and is highly relished by all stock. For grain sow 5 pounds of seed per acre in hills, or drills. For fodder, sow one-half bushel per acre, broadcast or in rows. Per lb. 30c, prepaid; not prepaid, 5 lb. 60c, 10 lb. \$1.00, 25 lb. \$1.75, 50 lb. \$3.25.

Feterita

Sweet Clover Bokhara (White). For years considered valuable only for the excellent honey which it yielded, its importance as a soil builder and inoculator for Alfalfa, as a hay crop and as a pasture plant, and its adaptability to generally unfavorable soils and conditions not then being recognized. Now, however, large acreages in some sections are devoted to this crop, and its true value is better known. Stock do not take to it readily at first, but soon learn to like it and eat it greedily. Sow 20 lbs. per acre. Per lb. 40c, ¼ bu. \$2.75, bu. \$10.00.

Alfalfa, or Lucerne. Alfalfa is being more generally grown as experience is teaching our farmers the proper methods to follow. Different soils do not now seem so difficult to overcome, especially when drained, pulverized, sweetened and inoculated. Alfalfa naturally prefers a deep sandy or gravelly sub-soil. Roots from 3 to 15 feet deep and a good stand on properly selected land should yield from 3 to 5 cuttings a year. We make a specialty of extra high-grade seed that tests 99 per cent pure or better. Treat your land to a liberal dressing of fine ground lime or more liberally to fine ground limestone well worked into the soil some three months to a year before seeding to alfalfa. Sow from 10 to 15 lbs. well inoculated seed per acre, using Nitragin. From April 1st to June 15th for the early Spring sowing, either drilled or sown broadcast. If broadcast, cover lightly with a light drag or with single stroke of a harrow. Many prefer sowing from July 15th to September 15th, when seeded late it gives the grower an opportunity to have his land clean and free from weeds. Lb. 40c, ¼ bu. \$4.00, bu. \$15.00.

SAND OR HAIRY VETCH

VETCHES

Sandvetch. (Winter Vetch.) Another forage plant from Europe, highly esteemed there. The Sandvetch prospers in the most barren soils, on those too poor to grow the winter tare. Six tons per acre of green forage have been harvested in one cut in poor silicious soils with second cut for seed in August alone or with a cereal, rye preferred, as this Vetch reaches a height of 3½ to 5 feet, and must have a support. Sow 60 to 75 pounds per acre. If good growth before winter, it may be cut, and again by March 15th. Eaten by all farm stock. Lb. postpaid, 35c, at buyer's expense: 10 lbs. \$1.75, 25 lbs. \$4.00 50 lbs. \$7.50.

SPELTZ or EMMER

Speltz—or Emmer. It is a most wonderful new grain which we are sure will prove of great value. Speltz is good for pasture. Speltz fattens in the green state, is a green grass hay food. Spelts is also a hay. It will yield 40 to 60 bushels of grain to the acre, equal to corn, or barley, oats, rye or wheat, of high feeding value, and tons of straw hay almost equal to timothy for feeding cattle. Sow it at the rate of 1½ bushels to the acre. Price, lb. 25c, 3 lbs. 60c, postpaid. By express or freight, ¼ bu. 50c, bu. \$1.75.

Shady Place Lawn Mixture. On nearly all lawns there are shaded, bare and unsightly spots on which the owners have difficulty in getting a good stand of grass. For such places this mixture is adapted. It is composed of grasses which naturally grow in shaded places. They are the finest and most costly of all grasses. Lb. 45c, 3 lbs. \$1.25, postpaid.

BROMUS INERMIS

Most Valuable New Grass Introduced in the Last Twenty-five Years.

Bromus adapts itself to nearly all conditions of soil and climate and yields enormous quantities of hay and makes abundant pasture. Defies drought and is not affected by frost. A decided success. It forms a very thick, dense sod and is a permanent grass not killed out by variations of weather. Easily destroyed when desired by plowing, however. Universally recommended by the Experiment Stations of the northwestern states and by the U. S. Dept. of Agriculture. Prof. Shepard, of North Dakota Agricultural College says: The eagerness with which it is sought by stock leads me to believe that it is of as much value as timothy for pasturage, and that the hay is as valuable, ton for ton. Sow early in the spring, 20 pounds per acre alone or 15 pounds if sown with alfalfa. Price, postpaid, lb. 40c, at buyer's expense, 10 lbs. \$2.25, 25 lbs. \$4.75, 50 lbs. \$9.00.

MILLET

Golden Millet. This is very profitable for farmers to grow for fodder. ¼ bu. 75c, ½ bu. \$1.35, bu. \$2.50.

Japanese Millet, or "Billion Dollar Grass," as it is sometimes called, is of recent introduction, and great claims are made for it as to productiveness and value as a forage plant. Its introducers say of it that it is a marvelous grower and luxuriant stoolet, and Prof. Brooks, of the Massachusetts Experiment Station is quoted as saying: At our station it produced 60 bushels of seed, 11,297 pounds of straw, 36,000 pounds of green fodder, 12,000 pounds of hay per acre, being superior to good corn fodder in feeding for milk, and in combination with the soja bean makes a very superior ensilage. Recommended highly for feeding dairy cattle, young stock and sheep, being very rich in nutritious elements. If sown latter part of April will be ready to cut for hay by middle of July. Attains a height of from 5 to 7½ feet, according to season. Not prepaid. ¼ bu. 45c, ½ bu. 75c, ¾ bu. \$1.35, bu. (36 lbs.) \$2.50.

Superb (Per). This variety is by far the best of any of the fall bearing strawberries. In growers opinions there has never been a variety introduced, either spring or fall bearing that has as much vitality and fruit producing qualities as the Superb. It seems almost unbelievable that, after producing a crop of fruit the first fall after being planted, they will also bear as large a crop the following spring as any of the spring sorts; still such is absolutely the fact, and, besides, they will produce another good crop the following fall; however, this variety does its very best when grown in hills and runners kept cut. The fruit of Superb is large, dark red, glossy, firm, and of extra good quality. The plants are healthy growers and make runners freely. Per doz. 50c, 100 \$2.50, postpaid.
